Point-of-care cardiac markers: market report 2026

SYNTHETIC SAMPLE. All companies, figures and findings in this document are invented for software testing.

This report covers point-of-care tests for cardiac troponin, natriuretic peptides and D-dimer used in emergency departments, ambulances and primary care.

1. Market size

We estimate the global point-of-care troponin market at USD 0.88-1.02 billion in 2026, growing at a CAGR of 9.5% from 2026 to 2031.

High-sensitivity assays are expected to account for most new placements by 2028 as emergency departments adopt 0/1-hour rule-out pathways.

2. Pricing

US list prices for point-of-care high-sensitivity troponin tests range from USD 11 to USD 16 per test, before group purchasing discounts.

European tender prices are lower and continue to fall as more CE-marked products compete.

3. Competitors

The table lists companies with point-of-care troponin products or late-stage programmes.

Company	Product	Sensitivity	Regions
Kestrel Diagnostics	K-Point hs-cTnI	High	EU (US pending)
Norvia Medical	Norvia QT hs-cTnI	High	EU
Altamira Bio	Biosensor hs-cTnI	High	In development
